

# Prescriber Program

**The launch of the Circava System™ allergy treatment program is starting in Florida. We are looking for primary care physicians and practices throughout the state to become prescribers of this treatment program.**

Our initial feedback from primary care physicians has been extremely positive! As a prescriber, you and your practice will benefit on many levels. Most importantly, you will see the impact this treatment may have on your patients suffering from allergic rhinitis and allergic asthma. For most patients, you'll no longer need to refer them to an allergy specialist for their condition, and your practice will benefit from a new, long-term revenue stream.

## **The Prescriber Program benefits include:**

### **COMPLIANCE SUPPORT**

The patient-friendly nature of this treatment already commands a high compliance rate (84%)\*. Potens Allergy also provides you with helpful instructional guides and checklists for patients to effectively manage their doses and keep an accurate log. Dr. Garcia, the founder and CEO of Potens Allergy, will also be available to answer any questions regarding this treatment protocol.

### **WEBSITE FEATURE**

Prescribers will receive placement on our website. When patients within their city or geographic area search for a provider, your practice name and contact information will appear. This feature will help to bring new patients seeking this treatment to your practice.

### **IN-OFFICE PATIENT EDUCATION**

Prescribers will receive a full complement of in-office patient education, including displays, brochures, and more. When displayed in your waiting room, these communications will prompt dialog from your patients about the treatment.

***Interested in becoming a prescriber? Just call us at 833-476-8367 and we'll share all the details.***
