

OTC allergy remedies vs. Circava™ drops

Which is right for you?

Why just temporarily mask allergy symptoms when you can actually cure them?

Circava System™ therapy by Potens Allergy is a new and highly effective allergy immunotherapy that provides lasting relief of allergy symptoms. Put an end to the expensive and endless cycle of buying over-the-counter allergy medications!

What are the advantages of Circava System™ therapy?

Circava System is a convenient oral therapy you take at home before bedtime. But besides convenience, there are many other reasons to use Circava instead of medications you buy at your drug store or supermarket:

Long lasting – Over-the-counter medications provide temporary symptom relief but achieve no lasting effect. Circava System therapy delivers powerful symptom relief for most people in as little as 22 days and they remain symptom-free throughout their progress toward full remission.

Single multi-allergen dose for all allergy symptoms – Because the dose is customized to your complete allergy profile, you won't have to purchase multiple over-the-counter products to treat all of your various symptoms.

Lower cost over the long term – The average American with allergies spends an average of \$566 each year on medications just to manage their symptoms, which can add up to tens of thousands of dollars over a lifetime. Circava System therapy may cost you more in the short term, but you will spend less money over time.

Safe – Most over-the-counter medications contain warnings, regarding both length of use and side effects. Many, like nasal decongestants, can only be used safely for a period of 3 days. Some can cause drowsiness, impacting a person's ability to drive or operate machinery. After many thousands of treatments, there have been no adverse effects reported with Circava System therapy. Additionally, Circava may be prescribed to children as young as 3.5 years of age, patients with some autoimmune diseases and those taking beta blockers.

Why continue to take over-the-counter medications when a powerful, customized and long-lasting immunotherapy is available to help you achieve full allergy remission?
